

TB10 Standard Mixing Valve

Continually developed since the 1950s, the Topliss TB10 rotary mixing valve has proven reliability.

With proven reliability and continuous improvement, the original solid brass Topliss mixing valve continues to set the standard for New Zealand bathrooms. Available in two models for either equal high or equal low pressures. A special kit (14T) is available to improve performance with 55°C tempered hot water or instant gas systems. (Available fitted or as an optional extra.) Every individual Topliss mixing valve is tested, by hand, in our Nelson factory. You can rest assured that when one of our valves leaves the factory, someone has taken the time and trouble to test it's water integrity.

Product Features

- Hot forged DR brass body ensures a longer life
- High and low pressure options
- Excellent performance with 55deg C tempered hot water systems (use model TB10 ELPT on low pressure systems)

Product	Order Code
Equal Low Pressure Mixing Valve (15-300kPa @ 70-75°C)	TB10 ELP
Equal Low Pressure Mixing Valve (15-300kPa @ 55°C)	TB10 ELPT
Equal High Pressure Mixing Valve (300-1000kPa @ 55-75°C)	TB10 EHP
