

Design

With many years of experience in mechanical engineering between the team at Topliss Bros. we have the skills and ability to satisfy most design needs. We have experience ranging from product design through to tool design and machine design. We use the latest CAD technology along with our wealth of experience to provide 3D modeling and drafting services.

Topliss Bros. have been known for our diversity in the jobs we have performed since establishment in the 1950s. We have designed and manufactured shower systems, instant water heaters, yacht reefurl systems and many other products under our own name. Not to mention the countless products, parts, machinery and tooling that we have designed for our customers.

We have designed machinery ranging from hydraulic concrete saws, bar feeders and automated fixtures for CNC machines, presses and press tools, through to medical equipment and paper towel dispensers. We provide design and drafting services for inventions and patents, and have experience dealing with these from the initial concept to right through the manufacturing stage.
